Contract Parts (Custom Made)

Contract Parts (Custom Made)

AAP is a high quality repetition engineering company, specialising in the manufacture of steel pipe fittings. We also manufacture specialised components from a variety of alloys including steel, brass, aluminium and stainless steel. With over 50 years of experience within AAP's organisation, the company has a strong foundation to be able to service our customers' needs.

Our specialist engineers can work closely with customers to provide quotes on any drawing or custom fittings provided to them. Alternatively with our advanced computer software we can assist in developing drawings based on product samples or descriptions given.

AAP's quality assurance department can provide quality management plans of production to suit the needs of the customer from full statistical control, materials tractability and testing on critical components.

AAP's production plants contain a large range of production equipment including multi spindle automatic lathes, CNC lathes and forging presses. This equipment is complimented

by an abundance of secondary operations machinery including milling, drilling, threading, sawing and welding fabrication.

For all customer based enquiries, our operations are well suited to provide professional service and timely solutions to your needs.
